Data on COVID-19 during Pregnancy: Severity of Maternal Illness

Monitoring the impact of COVID-19 during pregnancy can protect pregnant women and their babies.

Pregnant women with COVID-19 by age, United States [January 22 - December 14, 2020]  
Data were collected from 46,731 women, and age was available for 46,731 (100%) women.

Pregnant women with COVID-19 by race/ethnicity, United States, [January 22 - December 14, 2020]  
Data were collected from 46,731 women, but race/ethnicity was only available for 32,719 (70%) women.

Pregnant Women with COVID-19 who were hospitalized, United States, [January 22 - December 14, 2020]  
Data were collected from 46,731 women, but hospitalization data were only available for 38,770 (83%).

Pregnant women with COVID-19 admitted to the ICU, who required invasive ventilation, or who required ECMO, United States, [January 22 - December 14, 2020]  
Data were collected from 46,731 women, but ICU admission data were only available for 9,464 (20.3%) women, invasive ventilation data were only available for 7,435 (15.9%) women, and ECMO data were only available for 7,355 (15.7%).

<sup>1</sup>Cases with age <9 years and >54 years are excluded. Cases with unknown age are included.  
<sup>2</sup>Other race includes non-Hispanic American Indian or Alaska Native or non-Hispanic Native Hawaiian or Other Pacific Islander  
<sup>3</sup>Data were not available to distinguish hospitalization for COVID-19-related indications, such as worsening respiratory status, from hospital admission for pregnancy-related indications, such as delivery.  
<sup>4</sup>Abbreviation: ICU, intensive care unit; ECMO, extracorporeal membrane oxygenation, an advanced life support technique used for patients with life-threatening heart and/or lung problems.
